

Correction

In the article by Moon et al, which appeared in the February 2012 issue of the journal (*Arterioscler Thromb Vasc Biol.* 2012;32:236–246. DOI: 10.1161/ATVBAHA.111.241356), an incorrect figure appeared for Figure 5. The correct figure and its legend appear below. The online version has been corrected.

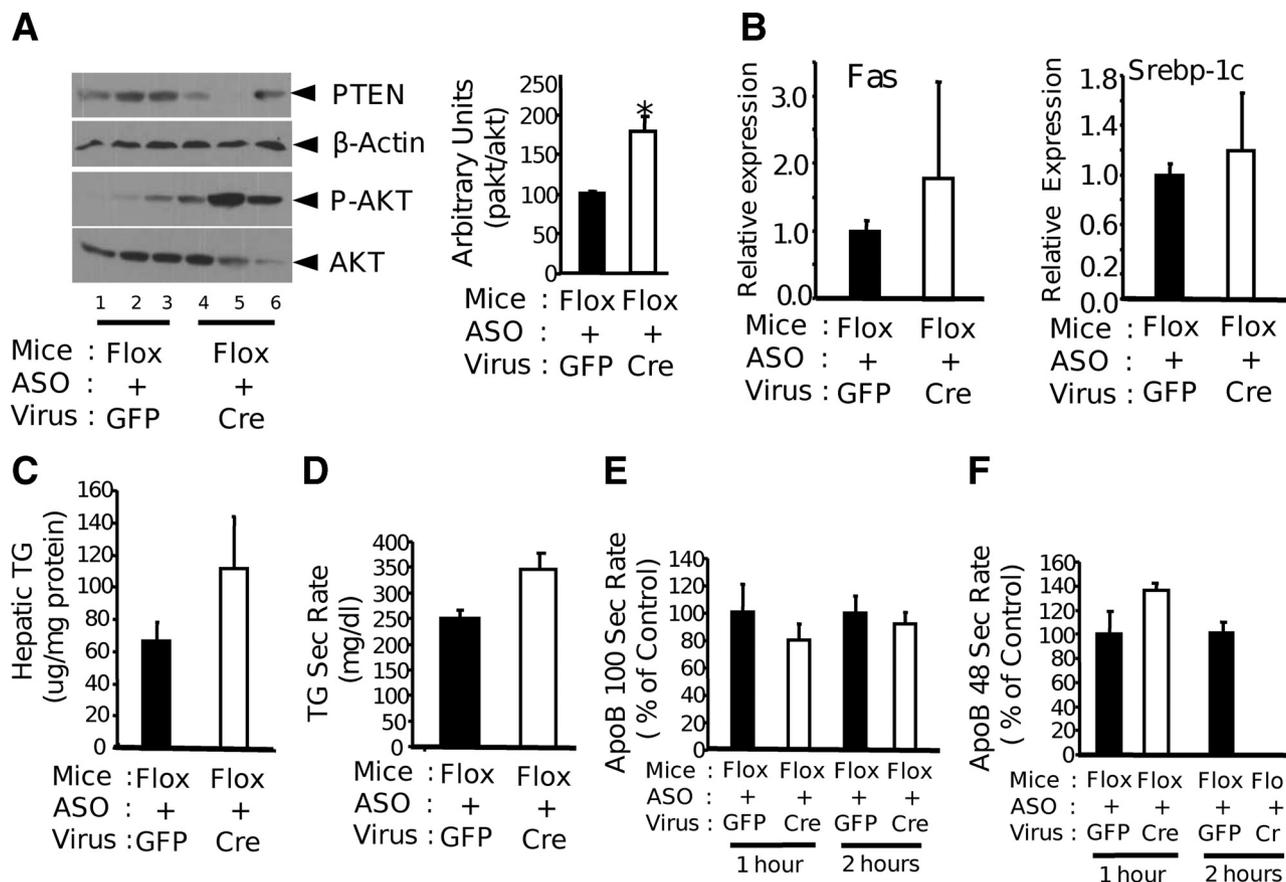

Figure 5. Treatment of floxed mice with *Srebp-1c* ASO before acute depletion of hepatic *Pten* blocks the increase in hepatic triglycerides (TG) but does not result in decreased apolipoprotein B (apoB) secretion. Floxed mice were pretreated for 4 weeks with *Srebp-1c* ASO before being injected with recombinant adenovirus containing either *Cre* (Cre) or *Gfp* (GFP). Studies were performed 4 days after injection of virus. **A**, Insulin signaling was increased significantly in mice receiving *Cre* adenovirus as assessed by the phospho-v-akt murine thymoma viral oncogene homolog (AKT), (p-AKT)/AKT ratio. **B**, *Srebp-1c* and *Fas* gene expression were not increased in ASO-pretreated mice receiving *Cre* adenovirus. **C**, Hepatic TG levels were not significantly increased and were in the normal range in ASO-pretreated mice receiving *Cre* adenovirus. **D**, TG secretion was not significantly increased in ASO-pretreated mice receiving *Cre* adenovirus. **E** and **F**, Secretion rates of apoB100 and apoB48 were not affected in ASO-pretreated mice receiving *Cre* adenovirus. n=3 for each group. *P<0.01.
