On the cover: Extensive atherosclerotic lesions develop in the thoracic and abdominal aorta of an *ApoE*^{-/-} mouse after 16 weeks of high-fat, high-cholesterol diet. A PAR1 inhibitor pepducin, PZ-128, currently being tested as an antithrombotic agent in a phase II clinical trial, significantly reduces atherosclerotic burden in the *ApoE*^{-/-} mice. (See pages 1368–1380.)
